

**CARE INSTRUCTIONS** regarding products made of untreated, solid oak:

Oak has a high tannin content, making it antibacterial. The product is therefore suitable for food use.

Prior to use, we recommend treating the product with sunflower oil or rapeseed oil. In order to maintain the product's glow and resistance, we also recommend the regular application of oil.

Please also note that the wood fibres may lift after commissioning.

This can be remedied by sanding with 240 grit sandpaper or finer.

The product is not dishwasher safe, however, it can be washed with soapy water on all surfaces.
