

BEHANDLINGSVEJLEDNING

Tak for valget af et Andersen produkt.
En del af produktet er messing. Messing er smukt,
men det kan ændre struktur med tiden. Oplever du
derfor, at messingens farve har mørke pletter eller
lignende, så skal den blot pudses.

Der findes et stort udvalg af pudsemidler hos byggemarkeder,
materialister og større supermarkeder – vær blot opmærksom
på, at det skal være til messing og følg altid produktets
vejledning.

Sørg for at pudsemidlet ikke rammer andre materialer i produktet.

Vi håber, at du bliver glad for dit nye Andersen produkt.

TREATMENT INSTRUCTION

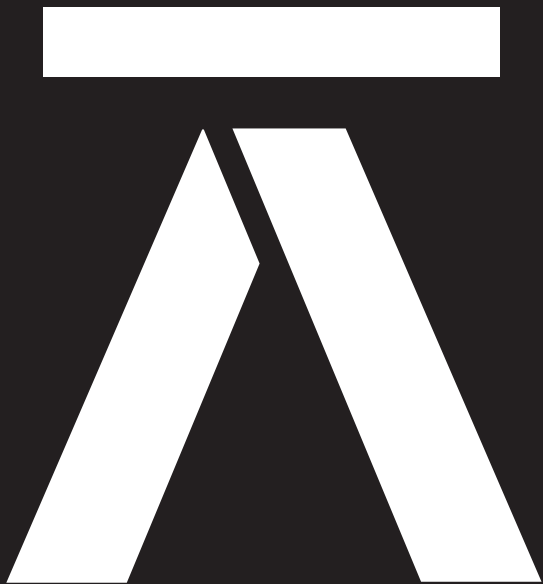

Thank you for choosing an Andersen product.
The base of the product is made of solid wood. Other parts are
made of brass. Brass is beautiful, but the colour and texture can
change over time. If you find that the brass develops black
spots or the like, it just needs to be polished.

Various brass polishes are available from hardware stores,
chemists and larger supermarkets – just be aware that the polish
be for brass and always follow the product instructions.
Make sure that the brass polish does not come into contact with
other materials than brass, since it can leave marks.

We hope you enjoy your new Andersen product.
